Universität Zürich[UZH]

Departments of Geography and Chemistry

DSA101.1
Introduction to Data Analytics and Python

Prof. Alexandria Deliz Liang

Prof. Meredith C. Schuman, meredithchristine.schuman@uzh.ch

Klicker Quiz

I expect you to understand these Python pitfalls for the exam.

After the quiz, you can review the questions and answers in exercise2.

https://pwa.klicker.uzh.ch/session/1104fce3-4f0e-4ff5-97dc-52b18c59d8e7

Next: Try exercise2

PythonRefresherNew

Functions, concepts, exceptions, conditions, iterables, and classes – oh my!

We will

- Get a refresher on Python syntax and concepts
- Learn about an object-oriented approach

I expect you to understand Python objects at this level for the exam.

And now: Let's start on the Collider

Can you…

(1) Run the collider? (Requires installing ipycanvas into your environment)

(2) Split into groups of two: one of you invites the other as a collaborator on your GitHub repo (the fork you made)?

(3) Each make a branch for development?

(4) Make changes to the collider? The README-collider file has suggestions, but you can do whatever you want.

(5) Incorporate your changes into one merged, updated collider?

Let's try!

I expect you to know how collaborative coding with Git works for the exam, based on this example.

Pushing your changes, syncing your fork
